APPENDIX:

The Appendix includes the following item(s):	
igties - a new or amended Abstract of the Disclosure	
a Replacement Sheet for Figure of the drawings	
a Substitute Specification and a marked-up copy of the originally-filed specification	
a terminal disclaimer	
a 37 CFR 1.132 Declaration	
a verified English translation of foreign priority	٠

ABSTRACT OF THE DISCLOSURE

A method for preparing a polycarboxylic composition, includes a stage in which a monosaccharide composition undergoes an electrochemical oxidation treatment carried out in the absence of sodium hypochlorite and in the presence of a) an amine oxide and b) a carbon-based anode. Preferably, the anode is selected from the group comprising carbon felt and granular active carbon. The electrochemical oxidation treatment can be carried out advantageously at a pH, preferably of between 11.5 and 14. The method makes it possible to obtain novel products, especially 2-carboxy-2, 3, 4-trihydroxypentane-dioicious acid, the salts and derivatives thereof.
